

Quench IV Therapy

Quench IV therapy is a type of intravenous (IV) therapy that aims to hydrate the body and replenish essential vitamins, minerals, and antioxidants. While specific formulations may vary among providers, Quench IV therapy typically includes a combination of fluids, electrolytes, vitamins, and sometimes additional supplements. The exact composition can depend on the provider and the specific needs of the individual receiving the treatment.

Here are some potential benefits and purposes of Quench IV therapy:

- 1. Hydration:** IV fluids are delivered directly into the bloodstream, quickly and effectively hydrating the body. This can be particularly beneficial for individuals who are dehydrated due to illness, intense physical activity, or insufficient fluid intake.
- 2. Replenishing Electrolytes:** Quench IV therapy often includes electrolytes such as sodium, potassium, and magnesium, which are essential for proper hydration, muscle function, nerve signaling, and overall bodily function. Replenishing electrolytes can be especially helpful for athletes, individuals with gastrointestinal illnesses causing dehydration, or those experiencing electrolyte imbalances.
- 3. Boosting Energy Levels:** Some formulations of Quench IV therapy include vitamins and minerals known to support energy production, such as B vitamins (e.g., *B12*, *B complex*) and magnesium. These nutrients can help improve energy levels and combat fatigue.
- 4. Supporting Immune Function:** Certain vitamins and minerals included in Quench IV therapy, such as vitamin C and zinc, are thought to support immune function. Adequate hydration and nutrient intake are essential for maintaining a healthy immune system, and Quench IV therapy can provide a concentrated dose of these nutrients.
- 5. Recovery from Hangovers:** Some providers market Quench IV therapy as a way to alleviate the symptoms of hangovers by rehydrating the body and replenishing depleted nutrients.
- 6. Improving Skin Health:** Antioxidants like vitamin C and glutathione, which are sometimes included in Quench IV formulations, may help promote healthy skin by reducing oxidative stress and supporting collagen production.
- 7. Alleviating Symptoms of Jet Lag or Travel Fatigue:** Some individuals use Quench IV therapy to combat the effects of travel-related dehydration and fatigue.

CONTENTS

Mineral Blend

Magnesium Chloride 80mg/ml
Zinc Sulfate 1mg/ml
Manganese Sulfate 20mcg/ml
Copper Gluconate 0.2mg/ml

Vita-Complex

Thiamine HCL (B1) 100 mg/ml
Niacinamide (B3) 100 mg/ml
Riboflavin 5 PO4 (B2) 2 mg/ml
Dexpanthenol (B5) 2 mg/ml
Pyridoxine HCL (B6) 2 mg/ml

Preserved Ascorbic Acid 500 mg/ml
