

# Folitin™

Rejuvenating the hair and scalp  
with the power of peptides

Your clients come to you for help because they want to look, feel and perform their best. If thinning hair or hair loss is one of their concerns, Folitin™ can help restore their hair – and their self-confidence. Our proprietary solution is a potent, peptide-based formula that nourishes the scalp, stimulates the hair

follicles and builds strength from the root. Use Folitin on its own, with red light, or with microneedling or dermarolling in clinic to create optimal conditions for hair regrowth, post-hair transplant healing and overall scalp health. Reawaken the follicle and support the growth of lustrous, healthy hair.

***“Think of peptides as a key and a lock. Peptides are the key that unlock the body’s own regenerative capabilities, restoring the health of the scalp and follicles to deliver hair regrowth.”*** ~ Nick Andrews, Entera Skincare Founder

# How Does Folitin™ Unlock Hair's Growth Potential?

Folitin™ delivers a powerful blend of peptides – nature's hair growth boosters – to revitalize scalp and follicular health at the cellular level. Folitin's proprietary formula contains four potent peptides that act on several biochemical pathways to support the growth of fuller and thicker hair.

Peptides are the building blocks of proteins, which are vital to numerous biological processes, from anti-aging to wound healing. Our carefully selected peptides have been shown in scientific studies to:

## IMPROVE SCALP HEALTH

Peptides can neutralize free radicals and reduce oxidative stress. Improving the health of the scalp prevents follicle shrinkage and promotes the formation of new hair follicles.

## REDUCE INFLAMMATION

Inflammation of the scalp is known to be associated with hair loss. Peptides reduce inflammation, helping to revitalize the follicles and create ideal conditions for hair regrowth.

## STIMULATE THE HAIR FOLLICLES

We have selected peptides that stimulate the activity of hair follicles by increasing the production of collagen and elastin, which are essential to the structure of strong, healthy hair.

## ENHANCE BLOOD FLOW

Peptides promote angiogenesis, or the formation of new blood vessels. Peptides also boost blood flow to the hair follicles, delivering nutrients that nurture the health of the follicle and removing inflammatory cells.

## STIMULATE GROWTH FACTORS

Peptides can act as signaling molecules that stimulate the production of growth factors in the scalp. Growth factors are proteins responsible for cell growth and differentiation. These growth factors can help stimulate the hair follicles, leading to increased hair growth.

## Who We Suggest Folitin™ For

Folitin™ may be used to address obvious signs of hair loss, or to prevent further hair loss or thinning in those who are at the very earliest stages of this condition. We typically find that addressing scalp and follicular health at its earliest stages provides the most optimal results.

- » **Men with male-pattern baldness or a mature hairline**
- » **Women experiencing hair loss due to hormonal changes or stress**
- » **Men after a hair transplant to reduce shedding, as well as speed healing and recovery**
- » **Women experiencing shedding or thinning due to sun exposure, damage from hair dyes and bleaching, and age-related wear and tear**

## What Our Customers Say

### Men

“I have been using since mid-July 2023. My physician, Dr. Jerry Cooley, at my Sept. 8 visit, stated he has seen noticeable growth over the past 8 weeks being verified with before and after photos. To everyone, Folitin is worth a trial period. I plan to be a user for some time with these early results.” ~ Tommy S.

“We have several genetic conditions in my family line that cause hair thinning and balding. I already had some knowledge about peptides and when I heard about this topical peptide product, I was really excited because I know peptides work. I wasn’t wrong. Folitin is working and the boost to my ego is pretty amazing.” ~ Josh

### Women

“This product is the REAL DEAL! My hairdresser has even commented now my hair is thicker and growing fast. I also had a small, dime-sized area on the right side of my head that always had a thin amount of hair. After using this product, that spot has completely grown in. LOVE, LOVE, LOVE this product!” ~ Jennifer

“I just finished my first bottle and my hair has already become thicker and healthier. My hair had become thin due to menopause and stress and nothing was helping til now.” ~ Susan

# Applying Folitin™: 6 Steps for Optimal Results

**1.** Apply 2 to 3 drops of Folitin™ to clean, dry area of the scalp. Folitin is a highly concentrated peptide formulation. A little goes a long way.

**2.** Focus on saturating the skin and root, not the hair itself. Apply the needle nose applicator on the bottle, just above or right on the scalp. Allow any excess to remain on the scalp.

**3.** Gently massage the scalp to promote circulation for 30 seconds.

**4.** Clinicians may combine Folitin with dermarolling or microneedling for deeper penetration. Suggested dermarolling/microneedling frequency: Once every 1 to 2 weeks.

**5.** Some clinicians offer red light or grounding therapy with Folitin application to increase circulation, reduce systemic inflammation and promote regrowth.

**6.** Apply Folitin daily for hair regrowth, then 1 to 3x per week for maintenance.

**Visible results in as little as 3 to 6 weeks.\***

\*Individual results may vary, and may be impacted by an individual's overall health, age, stress levels and specific health conditions. The cellular health of the client will always be the chief determinant to the ultimate success and results achieved.

# Folitin's Proprietary 4 Peptide Formula

**"Peptides rarely have any side effects. You are copying the body's exact key to open the lock of healing and regenerative processes. Because peptides are made by the body, it only opens the locks it should be opening. You are regenerating, resetting, and rebuilding." ~ Nick Andrews**

Folitin™ contains all-naturally derived, ethically sourced, vegan-friendly ingredients. We have carefully selected four therapeutic peptides that are backed by research to have powerful effects on scalp and follicle health.

**GHK-Cu COPPER PEPTIDE** – Promotes wound healing, has antioxidant and anti-inflammatory effects and stimulates essential cell processes, including glycosaminoglycan synthesis in the skin fibroblasts and blood vessel growth. Fibroblasts contribute to collagen and elastin production, which provide support to the hair follicle and help orchestrate the continuous production of new hair. There is also evidence that GHK-Cu blocks the hormone DHT, a byproduct of testosterone which inhibits hair regrowth.

**GROWTH FACTOR PEPTIDE** – Stimulates the growth and differentiation of cells in the outermost layer of the skin and hair follicle growth. Counteracts the effects of factors like micronutrient deficiencies, hormonal imbalances, and oxidative stress on hair growth.

**B-VITAMIN CONJUGATE PEPTIDE** – Crucial for the production of keratin, a protein that's a structural component of hair. Protects cells from damage.

**ANTIOXIDANT AND ANTI-INFLAMMATORY PEPTIDE** – Promotes collagen production, reduces inflammation, and supports natural antioxidant defenses for optimal scalp health.

## Meet Our Founder Nick Andrews

Folitin™ was developed by Nick Andrews, a biochemist with a passion for understanding

how chemical compounds found throughout the natural world impact health – and how to harness those discoveries to find solutions to complex problems.

Nick spent over 20 years in the life sciences and pharmaceutical industries, in roles that included process engineering, consulting, and operations director. His interest in the restorative properties of peptides began after a severe shoulder injury, when he was told by doctors that he would have limited range of movement and needed a joint replacement. Using his background in biochemistry, Nick went searching for other options to help him heal. He developed a deep understanding of the potential

for therapeutic peptides on human health, and used peptides in his own recovery to avoid surgery. Today, Nick is regarded as a world-leading authority on the emerging field of peptides. In addition to his commitment to bringing peptide-based hair loss solutions to the public, he created a highly regarded education course for clinicians on the use of peptides to support better health and vitality. He is also a sought-after speaker on the role of peptides in men and women's health optimization and wellness.

## How to Purchase Folitin

All orders can be shipped internationally.

# Commonly Asked Questions

---

## Product Information

### What is the full ingredient list?

Water (Aqua), Aloe Barbadensis (Aloe Vera) Leaf Juice, Carbomer, Hamamelis Virginiana (Witch Hazel) Water, Glycerin, Triethanolamine, Tetrasodium Glutamate Diacetate, Phenoxyethanol, Alcohol.

### Where is Folitin made?

We are manufactured exclusively in the U.S.

### Are there any side effects?

Folitin does not cause any disruption to hormonal systems or impede biological system pathways. Because it stimulates the body to enhance natural biological processes, no known side effects are produced. Folitin is also safe for chemically sensitive individuals.

### Is Folitin FDA approved?

Folitin is a cosmeceutical, not a drug, and is not regulated by the FDA.

### How long does one bottle last?

Between one and three months, depending on the size of the area treated and frequency of use. We recommend using Folitin daily for hair regrowth, and then 1 – 3x per week for maintenance.

## Applying Folitin

### How does microneedling, dermarolling and red light therapy improve results?

It's the concept of a healthy wound. Microneedling and dermarolling both increase absorption into the dermis, or the outer layer of the skin, and stimulate regeneration of the tissues. You can also add red light therapy to increase circulation.

### How long should clients wait before showering?

We recommend waiting several hours.

### Should sun exposure be avoided after application?

Folitin does not generate any sunlight sensitivity. Sun exposure is not a concern.

### Is the scalp or hair greasy or messy after application?

If the application directions are followed, there should be no excessive residue or greasiness. A light layer of Folitin will be readily absorbed by the skin when gently massaged into the target area. Clients should be able to return to work afterward or return to normal activities.

## Recommendations for Use

### My clients are using other hair growth medications. Can they also use Folitin™?

Folitin may be used with other hair growth medications and dihydrotestosterone (DHT) blockers, including: oral and topical finasteride, minoxidil, dutasteride, or platelet-rich plasma injections. We recommend Folitin application in the morning while continuing the minoxidil protocol in the evening. It's important that Folitin doesn't compete with minoxidil for topical absorption. Some clients find they are able to discontinue minoxidil after 1 to 2 weeks weeks of Folitin use, because their scalp is in a much better state of health.

### Is Folitin safe for clients with autoimmune conditions?

Autoimmune conditions can be complex and in some cases can be exacerbated by growth factors when applied topically. In these cases, we recommend spot testing a small area first. While skin reactions are uncommon, they can occur with any product especially if someone is currently experiencing autoimmune related issues.

### Is Folitin recommended for post-hair transplant clients?

Yes. The period after a hair transplant is crucial for healing and recovery. An estimated 2 million people (mostly men) worldwide underwent a hair transplant procedure in 2021, according to the International Society of Hair Restoration Surgery. Afterward, it's essential to take care of the scalp to ensure the procedure is a success. The peptide blend in Folitin can assist with wound healing, reducing inflammation, and promoting recovery.

### Is Folitin safe for chemically sensitive individuals?

Folitin does not use harsh chemicals or hormone-altering compounds, so it is generally safe for these individuals.

### Can Folitin be used for beards or eyebrows?

Yes, Folitin can be used for beards and eyebrows. Massage Folitin into the facial skin the same way that you massage it into the scalp.

### What may affect final Folitin results?

Folitin may be more beneficial if other lifestyle factors that can contribute to hair loss are addressed, such as diet, stress, and smoking. We recommend a diet rich in vitamins and minerals that support scalp and hair growth, including biotin, zinc, iron, niacin, and vitamin D; and reducing exposure to harmful heavy metals and other toxic substances in air, food, and water that could increase the body's free radical burden. Also, managing health conditions that could cause systemic inflammation.
